ABSTRACT

As part of a larger study to provide "indicators" of high school educational performance, this report presents data on remedial services provided to 15,042 college freshmen (1996-97) in Oklahoma public colleges by Oklahoma high school for the graduating class of 1995-96. The study used a student-cohort flow system to track student data semester-by-semester, including courses taken and whether a course was remedial or not. A table summarizes remediation rates by county for science, English, math, and reading. The bulk of the report is in the form of a table for each high school, grouped by county, followed by the college freshman headcount, percentage of freshmen taking remedial courses in the four subject areas, and an unduplicated headcount and percentage of students taking remedial courses. The data show that 37.3 percent of freshmen took at least one remedial course. Mathematics remediation was the highest, with 33.1 percent of freshmen taking a remedial mathematics course. (DB)

The Oklahoma State Regents for Higher Education in compliance with Titles VI and VII of the Civil Rights Act of 1964, Executive Order 11246 as amended, Title IX of the Education Amendments of 1972, Americans with Disabilities Act of 1990 and other federal laws do not discriminate on the basis of race, color, national origin, sex, age, religion, handicap, or status as a veteran in any of its policies, practices, or procedures. This includes but is not limited to admissions, employment, financial aid, and educational services.

This publication, duplicated by the State Regents' central services, is issued by the Oklahoma State Regents for Higher Education as authorized by 70 O.S. 1991, Section 3206. Copies have been prepared and distributed internally. Copies have been deposited with the Publications Clearinghouse of the Oklahoma Department of Libraries.

OKLAHOMA EDUCATIONAL INDICATORS PROGRAM

REMEDIATION REPORT FOR OKLAHOMA HIGH SCHOOL GRADUATES AS FRESHMEN AT OKLAHOMA PUBLIC COLLEGES

BACKGROUND

As part of the State Regents' cooperative effort with the State Department of Education to provide measures or "indicators" of educational performance, the High School Indicators Project has produced the "College Remediation of Oklahoma High School Graduates" report.

The data used to construct this report come from the Oklahoma State Regents for Higher Education. The data are created from the Unitized Data System (UDS). The UDS is a data collection system whereby institutions collect a number of distinct "units" of data for each individual student each and every semester. These units of data are then "aggregated" into numbers by computer programs designed to create the information reports needed from the larger database.

METHODOLOGY

This report represents the high school graduating class of 1995-96 as 1996-97 college freshmen. Since it is not possible to track individual high school graduates to college with this database, a like-type population was created. The freshman class consists of the first-time entering freshmen in a public institution of higher education that were 17-, 18-, or 19-years old and were graduates of an Oklahoma high school. These freshmen could have been full- or part-time students who entered college in the fall semester. This fall cohort represents 15,042 students.

Next, this study used the student-cohort flow system to track student data semester-by-semester. This report examined the courses taken by the students in this cohort throughout the 1996-97 academic year. If a student took more than one remedial course in one subject area, they were counted only once in that cell. On the other hand, if a student took more than one remedial course in more than one subject area, that student was counted once in each of those subjects. Finally, for the total count, a student was counted only once even if he took more than one remedial course. The total number of students in the 1996-97 cohort who took a remedial course was 5,720, which was 37.3 percent.

For public institutions of higher education with five or fewer students, the freshman headcount has been entered but no additional information has been provided in order to comply with the federal Privacy Act. An asterisk has been entered next to the freshman headcount as a reminder that this situation exists. If the freshman headcount for tier totals (comprehensive, four-year, two-year, and total) is greater than five, the data for each subject are provided.

FORMAT OF REPORT

The format of the report is a column style with each high school, grouped by county, down the first column followed by the freshman headcount in the second column. The next four columns are the four subject areas: science, English, mathematics, and reading. Each of these four columns contains a count and a percentage of the freshmen within that subject. The last column contains the unduplicated count and percentage, which means a student could have been remediated in more than one subject area, but would only be counted once in this column.

ANALYSIS

The county totals are shown as summaries after their respective high schools. Table 1 represents these figures at a glance. This table shows 37.3 percent of the first-time freshmen in 1996-97 in remedial courses in science, English, math, or reading. Mathematics remediation was the highest rate by far with 33.1 percent of the first-time freshmen taking a remedial mathematics course. The next highest rate was 12.4 percent in English. Both reading and science remediation rates were 3.6 percent. These figures do not sum to the state total remediation rate because a student could have taken a remedial course in more than one subject area, but would only be counted once in the state total.

A county comparison shows the county of Adair with the highest remediation rate with 61.4 percent of the first-time freshmen from this county taking a remedial course in 1996-97. The lowest remediation rate for a county was 16.1 percent, which was recorded for Ellis.

For each county, district, and high school site the total headcount and remediation rate by subject are provided by each individual public institution of higher education and higher education tier. Due to the detailed information provided for each high school site, district, and county in Oklahoma, the report is over a thousand pages long. Consequently, the summary by site/county has been selected for review as an attachment.

CAVEAT

It should also be kept in mind that the data displayed in this report are not complete in several respects. The coding of first-time freshmen depends entirely on institutional input. If a higher education institution mis-codes a high school code or improperly codes the student's level or status, data will be lost to the report.

Although all remedial coursework is included, some institutions did not distinguish among some subject areas. Refinement in coding remedial courses will be reflected in future reports. For the present, this report is as complete as can be constructed. This report should be used as an "indicator" report not as proof or evidence.
